

CBD & DRUG TESTING

CBD

- There is currently NO over-sight by the U.S. Food & Drug Administration of the CBD Industry.¹
- Over-The-Counter CBD products claim to contain CBD from hemp. Some do. Some do not.²
- Many CBD products that claim to contain CBD are fraudulent, containing no CBD at all.³
- Over 600 CBD products tested in Colorado were found to be THC rich with little or no CBD.⁴

THC

- THC (the psychoactive component in cannabis) is cumulative, meaning it builds-up in the body over long periods of use.⁵
- Even the smallest amounts of THC can accumulate in the system with repeated use.⁶
- At this time, use of CBD products may yield a positive drug test result due to the THC content.⁷
- An individual may test negative for THC for a few weeks and then test positive once the THC accumulates.⁸

IMPAIRMENT

- THC resides in the body's fat cells, which include the brain.⁹
- At this time there is no scientific measurement of impairment, however one can be considered under-the-influence of an impairing substance if the THC accumulates in measurable amounts.¹⁰

**Use of CBD products is a “Buyer Beware” situation,
as one never knows what they are consuming!¹¹**
